Upon delivery to the vehicle division by the lienor or encumbrancer of the certificate of title to the vehicle on which the lien or encumbrance was given, together with satisfaction thereof, the division shall satisfy the lien or encumbrance on its records and on the certificate of title to the vehicle."

R17-4-608. Special educational vehicle standards**A. General requirements:**

1. School buses designed for transporting children with special transportation needs shall comply with standards applicable to school buses. Because of the use of special equipment on these buses, certain modifications and/or exceptions in these standards shall be made, particularly in the bus body.
2. These standards address modifications as they pertain to school buses with a gross vehicle weight of 10,000 pounds or more and standard seating arrangement that provides a capacity of 10 or more children prior to modification.
3. Any school bus that is used specifically for the transportation of children who are confined to a wheelchair and/or other mechanical restraining devices prohibiting their use of regular service entrance shall be equipped with a power lift.
4. The lift shall be located on the right side of the body, in no way attached to the exterior sides of the bus, not confined within the perimeter of the school bus body when not extended.

B. Special service entrance:

1. Bus bodies may have a special service entrance constructed in the body to accommodate a wheelchair lift for the loading and unloading of passengers.
2. The opening, to accommodate the special service entrance, shall be at any convenient point on the right (curb side) of the bus and far enough to the rear to prevent the door(s), when open, from obstructing the right front regular service door.
3. The opening may extend below the floor through the bottom of the body skirt. If such an opening is used, reinforcements shall be installed at the front and rear of the floor opening to support the floor and give the same strength as other floor openings.
4. The opening, with doors open, shall be of sufficient width and depth to allow the passage of wheelchairs. The minimum clear opening shall be thirty (30) inches in width.
5. A drip moulding shall be installed above the opening to effectively divert water from the entrance.
6. The entrance shall be of sufficient width and depth to accommodate various mechanical lifts and related accessories as well as the lifting platform.
7. Door posts and headers from the entrance shall be reinforced sufficiently to provide support and strength equivalent to the areas of the side of the bus not used for service doors.

C. Special service entrance doors:

1. A single door may be used if the width of the door opening does not exceed forty (40) inches.
2. Two doors shall be used if any single door opening exceeds forty (40) inches.
3. All doors shall open outwardly.
4. All doors shall have positive fastening devices to hold the doors in an open position.
5. All doors shall be weather sealed, and, on buses with double doors, they shall be so constructed that a flange on the forward door overlaps the edge of the rear door when closed. If optional power doors are installed, the design

- shall permit release of the doors for opening and closing by the attendant from the platform inside the bus.
6. When manually operated dual doors are provided, the rear door shall have at least a one-point fastening device to the header.
 7. The forward-mounted door shall have at least three fastening devices. One shall be to the header, one to the floor line of the body, and the other shall be into the rear door. These locking devices shall afford maximum safety when the doors are in the closed position.
 8. The door and hinge mechanism shall be of a strength that will provide for the same type of use as that of a standard entrance door.

 4. Power lifts shall be equipped so that they may be manually raised and lowered in the event of a power failure to the lift mechanism.
 5. Lift travel shall allow the lift platform to rest securely on the ground.
 6. All edges of the platform shall be designed to restrain the wheelchair and operator's feet from becoming entangled during the raising and lowering process.
 7. When elevator-type lifts are used which lower through the floor of the bus body, the platform shall be fitted on both sides and rear with full-width shields which extend to the floor line of the lift platform.
 8. A restraining device shall be affixed to the outer edge (curb end) of the platform that will prohibit the wheelchair from rolling off the platform when the lift is in any position other than fully extended to ground level.
 9. A self-adjusting, skid-resistant plate shall be installed on the outer edge of the platform to minimize the incline from the lift platform to the ground level. This plate, if so designed, may also suffice as the restraining device described in subsection (D)(8). The lift platform must be skid-resistant.
 10. Buses equipped with an electrical power lift shall be provided with an additional battery for operation of the lift mechanism. Design shall be such that the battery is charged through the charging system of the bus but cannot be discharged through the chassis electrical system.

 - 1. When more than one LPG fuel container is used in a system, a backflow check valve shall be installed in each fuel line to prevent passing of fuel between tanks during filling operations. A hydrostatic relief valve with a pressure setting not lower than 350 psig, nor higher than 500 psig, shall be installed between the backflow check valves and the fuel lock-off valve to the carburetor.
 - 2. A pressure relief valve outlet shall be piped to a discharge port vented upward at a 45° angle in the body skirting area, just below the lower rub rail at the bus floor. The discharge port shall not be installed within 36 inches of any door, the filling connector or exhaust port.
 - 3. The manual shutoff valve shall be readily accessible for emergency use without opening the access door.
 - 4. An automatic fuel supply shutoff valve shall be installed, in a protected location, and shall be activated by engine vacuum or oil pressure.
- G. Dual fuel systems only:
 - 1. When dual fuel systems are utilized, the compressed or liquefied gas container(s) may be mounted on the opposite side of the bus from the gasoline fuel tank.
 - 2. This shall not prohibit installation of a container behind the rear axle of a bus, provided that the rear frame cross-member remains intact, or is reinstalled after the fuel container is in place.
- H. Fuel conversion systems. When a bus is converted to straight compressed or liquefied gas, the gasoline tank shall be removed.
- I. Clearances. Compressed or liquefied gas containers and supply lines shall have a minimum clearance of 8 inches from the engine exhaust system unless a protective shield is provided. The shield shall be constructed of at least 18 gauge metal, properly braced and attached to protect the fuel system from radiant heat from the exhaust system. This shield shall not be attached to exhaust or fuel system.
- J. Fuel lines and installation:
 - 1. Fuel lines shall be permanently secured at intervals of not more than 2 feet and shall be placed in such a manner as to minimize the possibility of damage due to vibration, strains or wear.
 - 2. Fuel lines passing through a structural member shall be protected by rubber grommets or bulkhead fittings and follow the main frame channel wherever possible.
 - 3. All LPG fuel lines shall be approved stainless steel, wire braid reinforced, with a minimum working pressure of 350 psig, a minimum burst pressure of 1750 psig, and labeled at no greater than 10-foot intervals as LP Gas or LPG.
 - 4. All CNG pressure tubing shall be seamless or welded steel and shall be tested and certified to a working pressure of 2400 psig with a 4-1 safety factor.
- K. General:
 - 1. If access to the fill valve and gauging device is through the body skirt, a locking door shall be provided. The man-

ual shutoff valve should be accessible through this door, unless the tank is remotely filled.

- 2. The letters "ESV" in two-inch red block letters, painted or decal, shall be placed in a visible location nearest the container shutoff valve to mark the location for emergency use.
- 3. Decals or lettering may be placed adjacent to the refueling point with refueling instructions or identification as to the use of a compressed or liquefied gas.
